

## **SOMNOmedics installs 10 SOMNOscreen™ plus in Thailand's biggest Sleep Lab**

SOMNOmedics is pleased to announce that the internationally renowned Siriraj Hospital in Bangkok has chosen SOMNOmedics' SOMNOscreen™ plus PSG system with the EEG 10-20 headbox and the EEG 32 headbox for full polysomnography, advanced neurological diagnostics and long-term EEG measurements.

The Siriraj Hospital is both the oldest and the largest hospital in Thailand, located in its capital Bangkok. With a capacity of more than 2,000 beds and more than one million outpatient visits per year, Siriraj is one of the largest and busiest medical centers in Thailand. Due to its excellent reputation, it is the referral center for all hospitals in Thailand and South East Asia.

Initial discussions with the Siriraj Hospital have started as early as 2010 through SOMNO-medics Thai distributor Saint Medical and have now found a successful ending with the order of 10 SOMNOscreen™ plus systems with the EEG 10-20 and EEG32 headboxes.

The SOMNOscreen™ plus EEG 32 is an extremely small, portable long-term EEG-system that fits in every vest pocket. With a total of 58 channels and 32 hours of recording duration it provides a full 32 channel long-term EEG, polygraphy and polysomnography – everything from a single source. Thanks to the miniaturization, the device still remains small and handy, the built-in wireless data transfer guarantees full mobility and the greatest possible comfort to the patient.
