

## SOMNOmedics attending the APSS SLEEP 2013 show in Baltimore

During this years APSS SLEEP show 2013 SOMNOmedics showed its presence in the market and was able to get in contact with both existing as well as new customers. At the SOMNOmedics booth interested customers could get information on SOMNOmedics PSG and HST systems and devices as well as dive into the extensive analysis software DOMINO.

SOMNOmedics devices convince the customers and physicians being small, light-weight and patient-worn. Our SOMNOscreen is the smallest fully portable PSG-System available, which can be used from a Screener to a full PSG, is upgradeable at any time and compatible with in lab diagnostics and home sleep testing. The SOMNOmedics wireless solution allows patients data to be observed from any environment.

After the show hours it was a pleasure for the SOMNOmedics team to meet William C. Dement during an evening event after the Sleep show. Prof. Dement is known as the father of sleep medicine as he is a pioneering US sleep researcher and founder of the Sleep Research Center, the world's first sleep laboratory, at Stanford University. Having found the connection between dreaming and rapid eye movement, he became the first to coin the sleep stage of REM and later defined and named the other stages of sleep. Prof. Dement today is a leading authority on sleep and the diagnosis and treatment of sleep disorders like sleep apnea and narcolepsy.

The SOMNOmedics US team meeting Prof. Dement in Baltimore

In follow up to the APSS Sleep 2013 show we would like to thank all the distributors and customers of SOMNOmedics who attended the show and visited our booth and wish for a great ongoing partnership and cooperation with everybody. We very much look forward to next year's meeting in Minneapolis!
